

Data Carpentry Workshop Content Requirements

Approved by the Data Carpentry Steering Committee, 2016 April 2

A Data Carpentry workshop teaches the core skills for working with data effectively and reproducibly. A Data Carpentry workshop must include:

- a Data Carpentry lesson on data organization - ecology-spreadsheets, genomics-organization, spatial-organization
- three other modules in the same domain from the Data Carpentry curriculum

In special circumstances the Executive Director or Associate Director may grant permission to deviate from these rules.
